When you think of Chia seeds you probably think of the Chia pets – those little seeds are edible and great for you. One ounce of chia seeds contains 5 grams of alpha-linoleic acid. This is a type of omega-3 fatty acid and plays a major role in energy production and inflammation reduction. Chia seeds also contain antioxidants which help fight free radicals in your body. Fiber is also present in Chia seeds and helps to keep the digestive system healthy and can reduce cholesterol. Emerging research is also showing Chia seeds can help lower cholesterol, triglycerides and blood pressure.
